

Drawing Title: First Tier Theoretical-Top View (Second Version)

Drawing Number: FTT-2 ("First Tier Theoretical 2")

Generation number (of drawing): Second

Building material: Locally cut stones from ATOP the Giza Plateau. See the book reference to learn how these were really moved and where they came from.

General Location within the Great Pyramid: External Periphery of lowest tier of the structure.

Height within Structure: This tier set is only about 58.1 inches.

Dimensions of Chamber/Space: The rock layers represented are a hedge/fence around the 756 foot by 756 foot structure.

Electronic location: www.SolomonSeries.com

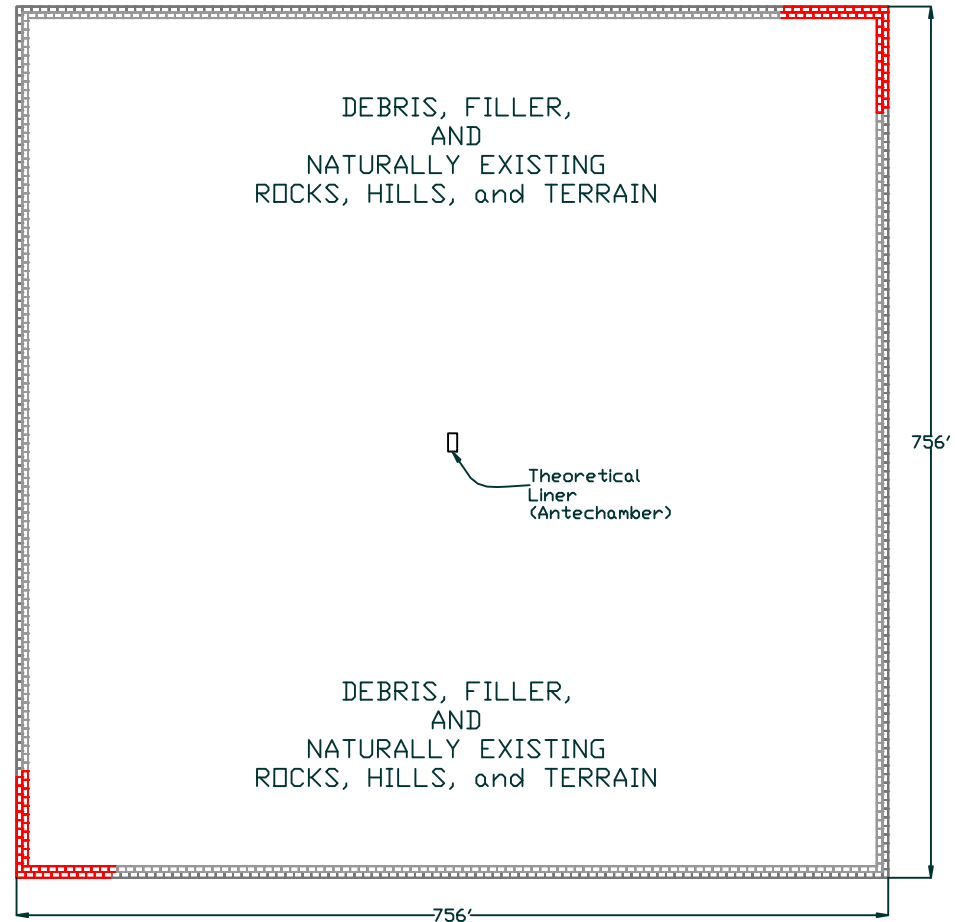

Literature Reference: The Solomon Series: Great Pyramid Mystery Resolved

Copyright: 2007 Ted Whidden,

Date of drawing: March 2007

Comments: You must see the book reference above to fully understand the significance of how many stones are represented here in this drawing. NOTE: The most important "stones" are the ones not shown in the central region. They are not shown, because they do not exist. See the book reference. You must know how these were positioned, where they came from, and who placed them. See the book, The Solomon Series: Great Pyramid Mystery Resolved. Notice the NE and SW corners which are naturally existing structures (hills), also be aware of a hill on the south side.

Special Thanks to Mrs. Tanya Taylor, Wade Strickland and the Drafting class at Washington-Holmes Technical Center for this drawing.

*Naturally Existing Rock
(SW Corner - Steps - cut in Hill)*

*Naturally Existing Rock
(NE Corner - Steps - cut in Hill)*
